The book, written by a team of investigative journalists, takes a close look at several cases of wrongful conviction. These cases are all different, but they share one common thread: innocent people were sent to prison for crimes they did not commit.

One of the most disturbing cases is that of Michael Morton. Morton was convicted of murdering his wife in 1986. He spent 25 years in prison before DNA evidence finally exonerated him.

Morton's case is not unique. In fact, there have been numerous cases of wrongful conviction in recent years. The Innocence Project, a non-profit organization that works to overturn wrongful convictions, has helped to exonerate over 375 people since 1992.

There are a number of factors that can contribute to wrongful convictions. One factor is eyewitness misidentification. Eyewitness testimony is often unreliable, and it can be influenced by a variety of factors, such as stress, fear, and prejudice.

Another factor that can contribute to wrongful convictions is prosecutorial misconduct. Prosecutors are sometimes so eager to win cases that they engage in unethical or illegal practices, such as withholding evidence or intimidating witnesses.
